What we'll cover:

- What is Github Copilot in the CLI?
- How to install and use it?
- Lots and lots of live demos 4/2
- Give me a suggestion! ••
- Q&A + Wrapup ?

What is Copilot in the CLI?

GitHub Copilot in the CLI provides a chat-like interface in the terminal that allows you to ask questions about the command line.

What does it do?

GitHub Copilot in the CLI is designed to answer questions about:

- general shell commands
- git commands
- *gh* cli commands

Public Beta

GitHub Copilot, now in the terminal

•••

\$ gh copilot suggest -t shell "How do I find all the files bigger

Welcome to Copilot CLI!

I'm powered by AI, so surprises and mistakes are possible. Make suggestions, and share feedback so that we can learn and improve

Suggested command

find . -size +128k

? Select an option
> Explain command

Explanation

find is used to list files.
 specifies that we search in the current directory.
 -size +128k specifies that we only want files larger than 128

? Select an option [Use arrows to move, type to filter]

You must have an active copilot subscription

• install GitHub CLI with your package manager

2 authenticate in OAuth browser window

Install gh-copilot cli extension

1 brew install gh

- 2 gh auth login
- 3 gh extension install github/gh-copilot

Fip: Create an alias

create your own alias for gh copilot commands

I'm using zsh so I ran:

- 1 alias copilot='gh copilot' ; echo 'alias copilot="gh copilot"' >> ~/.zshrc && source ~/.zshrc
- 2 alias gcs='gh copilot suggest' ^
- 3 alias gce='gh copilot explain' ^

How do you use it? 🤪

To begin, run the help command gh copilot --help:

```
gh copilot
     Your AI command line copilot.
     Usade:
       copilot [command]
                Explain a command
       explain
                  Suggest a command
       suggest
10
11
     Flags:
12
      -h, --help help for copilot
      -v, --version version for copilot
13
     Use "copilot [command] --help" for more information about a command.
```

Copilot CLI Commands

there are two commands you can use with the *gh* copilot cli extension:

- 1 gh copilot explain
- 2 gh copilot suggest

Explain Command

this command is used to explain any shell, git or gh cli command:

- 1 gh copilot explain 'your query command in a string'
- 3 Example: gh copilot explain 'git lfs migrate import --everything --include="*.gz,*.png,*.jar"'

You can also follow the on screen prompts if you run this command:

1 gh copilot explain

the command you want to be explained must be in a string

Suggest Command

this command is used to get suggestions for any shell, git or gh cli inquiry:

1	gh	copilot	suggest	'what	you	want	to	do'	-t	<git< th=""><th> gh</th><th> shell</th></git<>	gh	shell
---	----	---------	---------	-------	-----	------	----	-----	----	--	----	-------

2

B Example: gh copilot suggest 'create a new codespace' -t gh

you can also run:

1 gh copilot suggest

and follow the on screen prompts

ok that was a lot of talking...

let's get into some demos 桊

Push a local folder to a new GitHub repo

We can create a GitHub repo with the cli

gh copilot suggest 'push a local folder to a github repo'

Explain a dangerous command 🔔

We can ask copilot cli to explain commands that appears simple enough, but are actually dangerous

1 gh copilot explain chmod -r 777 /

🚨 NEVER RUN THIS COMMAND ON YOUR MACHINE 🚨

Remove a file from a commit msg and keep the original commit msg 🧐

ever commit a file you didn't mean to add?

1 gh copilot suggest 'remove mistake.md from last commit keeping original commit message'

Download a Youtube Video 🤔

Did you know that you can download youtube videos with the cli?

1 github copilot suggest 'download youtube video'

How does Copilot in the CLI work? 😳

Behind Copilot in the CLI
